• The 2010 Team EPIC Guide To Speed!

Welcome to Team Epic Inc.!

Team Epic is the new face of Trinity Products. Team Epic is more than a new name, it is a new company dedicated to provide the R/C racing community with the best in Brushless, Li-Po and Nitro technology at affordable prices for the racer especially in these hard times.

Team EPIC is here for the long run and dedicated to making sure that you will be too. R/C needs a change to curtail the spiraling costs and technology needed to be competitive even on the weekly local level. People are confused And don't have the money to keep up and we lose them to other less expensive endeavors. Our goal at Team EPIC is to provide a place for them to continue R/C racing.

It is time to make R/C racing once again a sport of driving cars rather than whom can spend the most money.

TRINITY NEMESIS REPLACEMENT PARTS

TRI10567	Sensor Board, Nemesis/SpeedGems	\$15.99
TRI10568	Rebuild Kit, Sensor, Gasket, Screws etc.	TBA

Serious racer or backyard basher you still want the best when it comes to brushless motors. Forget about motor and speedo "combo" packages that are a compromise and go with separates for maximum performance.

The Trinity NEMESIS motors will out perform all the current motors on the market and combined with any decent speed control will crush the performance of any combo package!

Hook the NEMESIS up to any good speed control for the highest performance possible with todays technology. Don't buy into the "combo" nonsense, go with the best!

The NEMESIS is USA designed by Team EPIC and incorporates all the tricks and tweaks developed by Jim Dieter & Paul Lemieux while winning every major modified race during the past 18 months.

ROAR & IFMAR etc. legal.

A new stator, rotor and sensor are just a few of the many improvements incorporated into the NEMESIS line.

The Nemesis line besides Modified & ROAR Spec motors features 2 new built for rock crawling motors, a high power 19.5 turn and a super torque 21.5.

Nemesis Rotor Tuning Kits lets you tune your motor to any track. Each kit contain 2 rotors of different strength from what comes standard in the motors. Change the rotor depending on the length of the track to fine tune your horsepower.

Also available are the replacement standard rotors that come in the motors originally.

TRI10304	13mm Big Torque Modified Rotor	\$39.99

DUO MOTOR PARTS & ACCESSORIES

TRINITY NEMESIS REPLACEMENT PARTS

TEP1020	Sensor Board, All Duo & Platinum	\$15.99
TRI10350	Racer Light Weight Heat Sink	\$19.99
TRI10352	180mm Sensor Wire, Fits All Brushless	\$7.99

The new DUO2 Platinum Modified brushless motor is based on our famous DUO2 Roar Spec motors and features magnet and stator upgrades developed by Paul Lemieux and Jim Dieter and used by Paul to dominate the modified brushless classes for the past 18 months.

Fully adjustable timing allows precise adjustments for maximum on track performance.

The Duo2 Platinum replaces the Duo modified motors and offers higher performance, more adjustability, reliability and rotor longevity.

The hottest ROAR spec motor is the EPIC DUO2. An upgrade from the DUO in both brute power and top end. Infinitely adjustable timing allows for fine tuning your motor to the track and your battery pack.

The DUO2 comes standard with a 12.3mm rotor but may be upgraded to the 12.5mm rotor for even more low end on smaller tight tracks. ROAR legal with either size rotor.

All DUO2 motors are dyno tested and have the data right on the outside of the package so you know exactly what you are getting when you put your money down.

The DUO2 And Duo Platinum motors are ROAR, IFMAR etc. legal.

IMPORTANT NOTE!

When changing to a faster (lower turn) motor especially in ready to run vehicles, you will need to REPLACE THE PINION GEAR WITH A SMALLER NUMBER OF TEETH.

A good starting place is to drop a minimum of 1 tooth on the motor pinion gear for every wind you go down. For instance, if your car comes with a 21 turn motor and 30 tooth pinion gear, and you switch to a 15 turn motor, you have to go to at least a 24 tooth or smaller motor pinion gear.

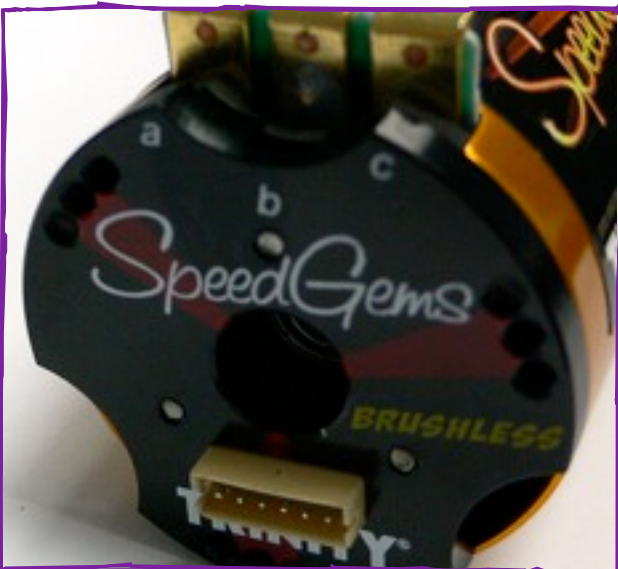

Run car for a few minutes and the motor should be cool enough to hold your thumb on it. If it is too hot you need to go to even less teeth on the motor pinion gear.

The faster the motor the more rpm it will have but less torque. You have to gear for the torque to keep from over stressing the motor, over heating it and burning it out. Improperly geared motors are the biggest cause of brushed and brushless motor failure. It is easy to detect and motors burned out with improper gearing will not be replaced under warranty.44

TRINITY SPEEDGEMS BRUSHLESS MOTORS

TRI10150	Nitronite 5.5 Turn Brushless	\$89.99
TRI10151	Chromium 8.5 Turn Brushless	\$89.99
TRI10152	Titanite 12.5 Turn Brushless	\$89.99
TRI10153	Amber 15.5 Turn Brushless	\$89.99

Like our world famous Speed Gems brushed motors the brushless series will offer the highest performance and quality at a consumer friendly lower cost.

The winds (turns) like their brushed cousins have been optimized to excel in specific venues of racing.

Nitronite 5.5 Turn, Designed for most TRAXXAS®, Kyosho®, Team Losi® & other ready to run trucks, buggies, touring cars, oval & 4wd racing buggies. Want to street race with the fastest motor on the block, then this is your choice. Most power but the shortest battery life. Works best with 5000mAh Li-Po & Ni-MH battery packs

Chromium 8.5 Turn, The ultimate motor for the TRAXXAS Slash®! Also excellent for 1/10th racing buggies on hooked up high traction tracks. The perfect choice for all 1/12th scale racing. Use with 3800mAh and up Li-Po & Ni-MH battery packs.

Titanite 12.5 Turn, Use in 1/10th ready to run trucks and 1/10th buggies. The perfect motor for 1/10th racing buggies on slippery or small tracks. Your best choice for an all around versatile modified motor. Long run time. Works best with 3000mAh and up Li-Po and Ni-MH battery packs.

Amber 15.5 Turn, Designed for use in all rock crawlers. Good choice for 1/10th touring cars, off-road buggies, racing and monster trucks. The Amber will give you the longest run times and works well with just about any capacity Li-Po or Ni-MH or even Ni-Cd battery pack.

• The 2010 Team EPIC Guide To Speed!

BRUSHLESS MOTOR ACCESSORIES

ROTOR TESTOR

TEP3000	I-GAUSS Rotor Tester	\$159.99
TRI10352	180mm Sensor Wire Fits All Brushless	\$7.99

Brushless motors go bad when the rotor loses its magnetic strength due to the demagnetizing effects of the stator while the motor is under power. When this happens the motor will lose bottom end, run hotter and eventually burn up the stator windings.

BRUSHED MODIFIED MOTORS

SPEEDGEMS EXTREME MODIFIED MOTORS

TRI10054	10 Turn Double Modified	\$65.99
TRI10055	12 Turn Double Modified	\$65.99
TRI10056	13 Turn Double Modified	\$65.99
TRI10057	15 Turn Double Modified	\$65.99
TRI10058	17 Turn Double Modified	\$65.99

Use the I-Gauss to test the strength of your rotor. A great tool for ROAR spec class racers for tuning your motors magnet strength for the track.

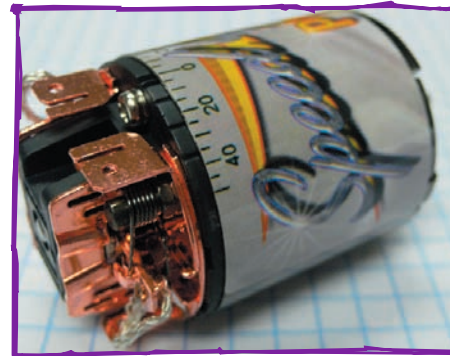

SPEEDGEMS PRO MODIFIED MOTORS

9250	9 Turn Double Cryptonite Modified	\$54.99
9255	10 Turn Double Pyrite Modified	\$54.99
9251	11 Turn Double Jet Modified	\$54.99
9256	12 Turn Double Nitronite Modified	\$54.99
9252	13 Turn Double Kobal Modified	\$54.99
9257	14 Turn Double Serpentine Modified	\$54.99
9253	15 Turn Double Titanite Modified	\$54.99
9258	16 Turn Double Chromium Modified	\$54.99
9254	17 Turn Double Amber Modified	\$54.99
9259	19 Turn Double Arconite Modified	\$54.99

Super small design. Comes packaged in screened zipper pouch. Powered by 9V battery.

EPIC INTENSE MODIFIED MOTORS

EP1115	10 Turn Double Modified	\$50.99
EP1116	11 Turn Double Modified	\$50.99
EP1117	12 Turn Double Modified	\$50.99
EP1118	13 Turn Double Modified	\$50.99
EP1119	14 Turn Double Modified	\$50.99
EP1120	15 Turn Double Modified	\$50.99
EP1121	16 Turn Double Modified	\$50.99
EP1122	19 Turn Double Modified	\$50.99

Special I-Gauss features include a super wide sensor design which makes placement of the rotor less critical for accurate readings. Zero reset button, no dials to fiddle with or move by accident. Hold button stores previous test for strength comparison. Extra V block mounting hole for longer Novak style and Duo 550 monster truck rotors.

19 TURN ROAR LEGAL SPEC MOTOR

CHAMELEON 2 HEMI WOUND 19 TURN MOTORS

----------	------------	---------

EPIC OUTLAW STOCK MOTOR FASTER THAN ROAR SPEC

EP1100	EPIC 19 Outlaw Spec Motor	\$64.95
--------	---------------------------	---------

The Trinity SpeedGems machine wound modified motors are the most popular brushed motors ever made. They still are big sellers for weekly racing in areas where brushless motors are not the status quo. The SpeedGems Extreme version combines our best can, FB-9 magnets and a machine wound armature for a long, life hi-power motor. The Extremes come in a range of 5 winds for just about any possible R/C scenario from buggies to boats.

P-94 big sized brushes for better performance and longer brush life. Adjustable timing and dual ball bearings.

The SpeedGems Pro's use machine wound armatures and FB-6 magnets for a mid-priced modified motor. Ten winds makes this the most popular motor for ready to run vehicles when you want to upgrade to a faster motor.

The EPIC Intense Modified motors like the SpeedGems use a machine wound armature in a modified motor can and endbell. Dual ball bearings and adjustable timing. P-94 sized brushes for more power and longer brush life. Our lowest cost modified motor.

For 19 turn racing the Chameleon, Komodo and Ultra Bird will fit all your needs.

IMPORTANT NOTE!

When changing to a faster (lower turn) motor especially in ready to run vehicles, you will need to REPLACE THE PINION GEAR WITH A SMALLER NUMBER OF TEETH.

A good starting place is to drop a minimum of 1 tooth on the motor pinion gear for every wind you go down. For instance, if your car comes with a 21 turn motor and 30 tooth pinion gear, and you switch to a 15 turn motor, you have to go to at least a 24 tooth or smaller motor pinion gear.

Run car for a few minutes and the motor should be cool enough to hold your thumb on it. If it is too hot you need to go to even less teeth on the motor pinion gear.

The faster the motor the more rpm it will have but less torque. You have to gear for the torque to keep from over stressing the motor, over heating it and burning it out. Improperly geared motors are the biggest cause of brushed and brushless motor failure. It is easy to detect and motors burned out with improper gearing will not be replaced under warranty.

TEP1501, 22 Turn	\$39.99

The Chameleon was designed with low end power for smaller tracks and 4 wheel drive vehicles.

The Komodo is designed to run on big tracks with long straights. Lots of top end power.

The Ultra Bird is your choice for oval racing.

Our 19 turn motors are all hemi wound and feature lay down brushes and locked timing to prevent commutator tweaking.

They come in standard and pro versions. The pro version has the commutator trued, armature rebalanced, magnets zapped, bearings and brush hoods aligned. The motors are hand assembled dyno tested and tweaked with dyno specs right on the package.

The CO27 is our highest rpm stock motor and works best on tracks with long straights.

The Mystery stock has a broad power band that makes it perfect for 4 wheel drive vehicles like touring cars.

The CO27 comes in both stock and a tweaked Pro version while the Mystery Stock comes just in a Pro version.

The Pro models have the armature inductance checked, it is then rebalanced and commutator diamond trued. The bushings and brush hoods are aligned. The magnets are zapped and the motors are then assembled with the highest performance brush and spring combinations.

The XX stock is built to ROAR rules but features ball bearings for longer motor life. No bushings to keep replacing. The perfect practice motor or the motor to use in your street racer.

The Monster Maximum modified motors are a longer 550 design with a bigger armature and longer, stronger magnets for more low end power torque and efficiency. These are excellent motors for your TRAXXAS® E-Maxx or just about any monster truck.

Available with either a mild 21 turn or wild 19 turn machine wound armature. We also offer a special super fast racing 17 turn hand wound pro version.

COMMUTATOR POWER DROPS

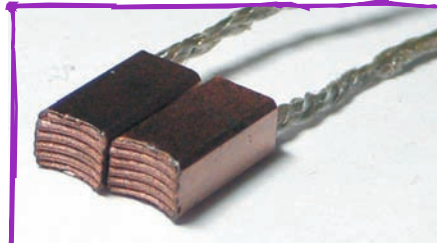

4024	Turbo Drops	\$4.99
4052	Black Death Power Drops	\$6.50

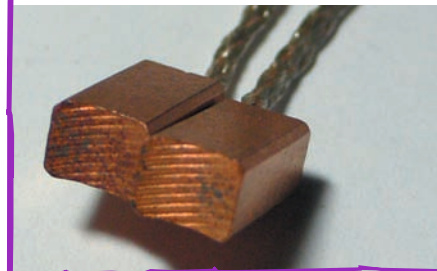

Dual ball bearings, big long wear brushes and adjustable timing feature on all of our Monster Maximum motors.

EPIC has 4 modified motors wound and tuned especially for rock climbing.

Built with our strongest magnets and high turn winds the Kreepy Krawlers will give you precise control and the power to go anywhere you want with your rock crawler.

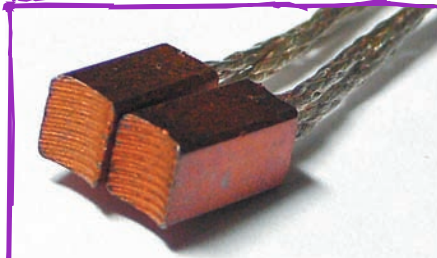

Hi-torque rotor design. Dual ball bearings. Adjustable timing. Capacitors system pre installed. Lay down style brushes are designed for all Trinity and EPIC stock and 19 turn motors. They are wider than they are high for more commutator wrap and more power.

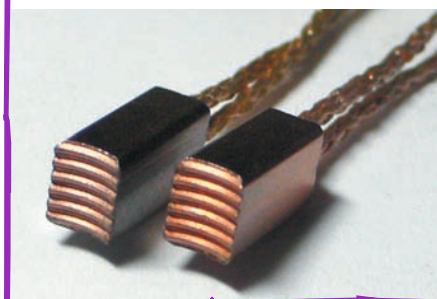

Unless specified the face of the brush is smooth for maximum contact area and require a long break in time. We recommend 30 minutes at 3 volts.

The serrated brushes like the top one break in quicker and offer more psi of brush to commutator contact for more overall power.

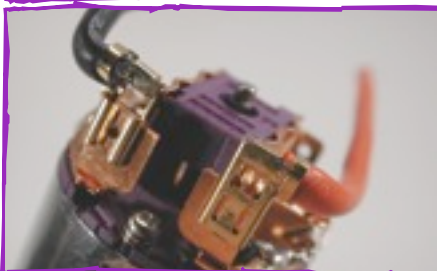

The cross cut face does the same as the serrated face but because the serrations are angled the whole commutator surface is used and the commutator does not groove as fast and need to be trued as often.

P-94 big brushes are used in all the Trinity and EPIC machine wound modified motors. The brush is wider and taller for a greater contact patch and more power. For the most power use 4380EPNT and for the longest brush life or harsh heat and dust conditions TRI13504.

Standup Brushes are used in older style 19 turn, machine wound modified and Yokomo style hand wound modified motors.

Standard style motor springs are used in modified motors like our SpeedGems, SpeedGems Extreme and EPIC Intense.

Overhead springs are designed for use on all Trinity and EPIC stock and 19 turn motors.

No Solder Leads are gold plated connectors that press fit on the

tabs of all Trinity/Epic and most other brushed motors. Allows wiring up your motor with no soldering.

Both Trinity and Team EPIC motor oils are the highest grade synthetic oils blended for maximum lubrication and not to break down in the high rpm produced by R/C and slot car motors.

TEP5001 is a new synthetic motor oil designed for the high heat and rpm produced by brushless motors.

EP Vigor specializes in Ni-MH and makes some of the best cells. Trinity has the EP4600 cells as high end high quality assembled packs.

EP also makes a true 1500 plus mAh receiver pack using their heavy duty cells which insures you a dependable battery pack for your expense very fast R/C vehicle. Transmitter & receiver battery packs are your only link to your vehicle and one area you do not want to use a no name battery of dubious quality and fake mAh rating.

The Intellect 4600SHV cell was constructed with a safer application in mind. Voltage was increased without compromising the integrity of the cell. More cell stability and 50% more cycle life than previous versions.

Team EPIC offers the IB4600 cells as matched, assembled and matched assembled packs and assembled sport packs. The Team matched is our best battery. The cells have been zapped for higher voltage, cycled to stabilize them and then matched on the latest Competition Electronics matchers.

The Team packs and cells feature the highest voltage and capacity and the lowest internal resistance. These are the cells you would want to use for serious competition.

Race matched packs and cells go through the same process as the Team and feature the same run times, they just have slightly lower voltage. These are great for almost all weekly type racing. All Team EPIC IB side by side battery packs are hand assembled and feature battery bars to handle high amp loads.

The new IB 5000mAh sport packs feature a super high ca-

----------	--------------------------------	---------

capacity that makes for long run times without the special charger needed for Li-Po batteries. Great backyard basher and monster truck, rock climber packs. These are great battery packs for TRAXXAS® vehicles.

The Intellect receiver packs are a true 1600 plus mAh. The cells are designed and assembled to be super durable to eliminate the possibility of battery related radio failure at speed which can have catastrophic results to your pocket book and vehicle. When picking a receiver or transmitter pack go with the best.

Two hi-end Intellect 1600mAh Ni-MH battery packs for the TRAXXAS Slash VXL® and E-Revo VXL®. Higher capacity than stock packs for longer run times. 2 packs allow more run time as you can charge one while running the other or run both at the same time with the optional TRAXXAS® dual pack adapter for 14.4 volts of super power.

Packs are Ni-MH technology so they are safe to charge, use and store unlike Li-Po which requires way more care and adult supervision for safe usage.

The dual TRAXXAS® packs are our biggest seller for these vehicles and since they are made by Intellect you are insured they are the highest quality cells and will offer the longest battery cycle life.

The dual packs are wired with TRAXXAS® connectors so they are true plug and play.

The Trinity Reference battery line offers the best Ni-Cd and Ni-MH battery packs for the money.

From 1800mAh to 5000mAh you can not find a battery that is better quality even at higher cost.

All packs are true capacity and come in 6 or 7 cell configurations with Tamiya style or TRAXXAS® connectors.

The Reference line also has a high capacity 2200mAh battery that plugs right into your Futaba 4PK radio.

Intellect branded silver plated battery bars are designed for building packs for 1/16th scale mini-cars or receiver packs. Perfect size for the 2/3 A cells.

The Intellect Trinity 5000mAh 30C has won more races in the past year than any other battery pack. This great battery has now been upgraded to 50C for 2010 for even more performance and is already ROAR legal.

While on the subject of "C" ratings we have reached technology wise an area where more (Which in most cases is false) as there is no way to test it by the consumer. Some battery resellers will and do put any sticker on their packs to make a sale.) no longer makes a difference. A 40 "C" pack is a 200 amp continuous discharge rate far beyond the capability of motors, and speed controls. Intellect besides making packs for serious racers has a complete line of packs with just about every plug combination for use in planes, boats and the monster truck you cruise around the neighborhood with.

Intellect/Trinity now have new smaller Li-Po saddle packs for those vehicles which do not use a stick or side x side type of battery. The 4200, 5000 and 5200mah fit most 1/10th scale vehicles including some 1/12th scale on-road cars. For vehicles like 1/8th buggies, some touring and 1/10th pan oval cars our super high capacity 6000mah should be your choice. It has the same foot print as the 4200 but is thicker.

The Trinity-Intellect Li-Fe battery pack for the popular Futaba 4PK radio will outlast any transmitter pack on the market.

The 6.6 volts makes it compatible without any type of voltage regulator. With a 2100mAh capacity our nitro team driver Chad Phillips has used it for 3 weekends of racing without having to recharge. In the past making it through the main with a 1/8th gas car would be a problem.

Most of the current Li-Po chargers will charge Li-Fe battery packs.

Team EPIC has it's own 5000 mAh 40C Li-Po battery pack. ROAR approved the EPIC Li-Po comes in a hard case with new lower height banana connectors for easier in car installation.

The EPIC packs come with male connectors and balance plug.

Also available wired with Deans connectors.

Two new Team EPIC Li-Po packs designed for the TRAXX-AS® truck owner with a affordable price for racer and basher alike. Hard case with balancing plug. Think amp carrying lead wires ended with a real TRAXX-AS® plug for easy plug and play.

New from Team EPIC is a super small and light receiver battery pack. Safe Li-Fe chemistry charges on most good chargers for Li-Po that contain a Li-Fe setting. Correct 6.6 voltage so no voltage regulator required.

The I-Balance charges, discharges and balances Li-Po, Ni-CD, Ni-MH, Li-Ion & PB Batteries. Built in AC power supply. Touch pad keyboard. Easy to read screen. Individual cell-voltage balancer. Delta-peak sensitivity, Auto charging current limit, Capacity limit, Data store & Cyclic charging & discharging. 1 to 6 cells.

The Quatro super charging system charges 4 battery packs at a time. 11-15V DC input, 50 watt charging capacity, 5 watt discharge. Charges 1 to 15 Ni-Cd/Ni-MH, 1-6 Li-Po/Li-Ion, Li-Fe or 1-10 cell Lead-Acid. Automatic, negative Delta Peak charge termination for Ni-Cd/Ni-MH. Automatic, voltage dependent, CC-CV process termination for Lithium and Lead-Acid.

Battery warmers are for use when charging and after charging your Li-Po battery pack. Keeps battery pack warm for a lower internal resistance, and higher voltage on the track.

This is the trick all the serious team racers have been doing. Keeps batteries at a constant voltage. Element wraps around pack for heating on all sides. Removable heat sleeve maybe used as tire warmer and allows case to be used to store battery pack.

Works off a 12 volt battery or power supply. Heat pulses to keep temperature constant.

The Lipo-Safe is used to hold your Li-Po battery packs while charging and discharging. In case of a catastrophic battery failure during the charging and or discharge process the Lipo-Safe

will help minimize but not prevent damages caused by fire.

Platinum fuel is the choice for racing and what is recommended for EXTech & Siro engines when used under serious racing conditions.

Platinum makes the most power but has the lowest amount of oil. That is always the trade off in nitro fuel. The more power the less oil. You go faster but engine wear is increased.

Only 100% pure ingredients are used and our proprietary oils allow you to run less oil without excessive engine wear like cheaper fuels which use low cost lubricants.

Monster horsepower fuel has more oil than Platinum and should be your choice for weekly racing as it makes a lot of power but promotes long engine life.

Monster Horsepower should be your "go to" fuel for just about any situation.

Trinity Monster Brew fuel is blended with a lot of oil, (16%) for use in all monster trucks.

Slightly less power than standard Monster Horsepower fuel but increased piston and sleeve life. Great to use when racing on really dirty, dusty or slippery tracks.

Like all Trinity nitro fuel Monster Brew will not rust the bearings nor gum up your engine.

All Trinity fuel is available in either quarts or gallons.

Remember when ordering fuel that gallons must ship Haz-Mat and shipping will be higher.

Trinity EXTech has the first glow-ignitor designed to fit the new bigger, high capacity, high voltage 4600mAh sub "C" cells from both Intellect and EP Vigor. The new cells mean you now charge your glow-ignitor less often and you always have enough voltage to fire up your nitro engine through a full weekend or more of serious nitro racing.

Available in 2 versions, TRI42100 is the Enduro glow-ignitor with a 4600mAh battery installed and TRI42101 is the same Enduro with battery but includes an AC wall charger (120v).

Metered handle so you can monitor the state of charge left in the battery. Orange anodizing makes the Enduro easy to find in your cluttered pit.

Enduro ships with either IB or EP 4600mAh Ni-MH cells depending on market availability.

The Roto-Matic is a mini sized starter for .095 engines up to .18's. Works off standard 6 cell stick pack. Small size but lots of torque.

The ExTech engines are built by Sirio especially for Team EPIC. These come in .21 off-road and .24 truggy models.

Each size engine is offered up 3 ways depending on the level of competition you compete at and the speed you need.

The standard version is direct from the factory and requires break-in before use. This is an excellent choice if you have some experience with nitro engines and want to do your own break-in process and tweaking.

The broken-in and tuned versions have been run and cycled and the carbs tuned for the best fuel flow and fuel adjustment. These engines are ready to bolt in and run. The perfect choice for someone new to nitro and of course the racer who needs a fast engine and doesn't have the time to do the break-in process.

Fully Modded versions are the fastest you can buy and are built to team specs. They have crank, rod, piston and sleeve work with

increases the power. They are broken-in and are tuned for maximum power. These are made and tuned for serious racing only.

Our Big Boy pipe is a new design 1/8th off-road buggy pipe. It has the widest power band of any pipe being sold. Makes for higher overall horsepower, better fuel economy and faster lap times. Heavy duty material and construction for added strength. Comes with manifold and hardware.

Team EPIC is the USA home for Sirio nitro engines. The best Italian made racing engines are now with full support.

The Sirio line features a competition .12, & .21 off-road, on-road and a sport .21 for monster trucks.

S12XXXV, .12 Competition For 1/10th touring cars. The 12XXXV is the fastest engine you can buy. Based on Sirio's .21 World Championship winning technology. We recommend Platinum 20% fuel. Features 3 ports, ABC, SG shaft, ceramic ball bearings.

S21CL7RSTI, .21, On-Road For 1/8th 4wd on-road cars. Use 20 to 25% Platinum fuel for the best power to mileage ratio. Features 7 ports, AAC, SG shaft, ceramic ball bearings.

S21BKEVO4STI, .21 Off-Road Competition For 1/8th off-road trucks and buggies on long fast, flatter off-road tracks. Higher rpm but less low end so more top speed. Use Platinum 30% fuel. Features 5 + 2 ports, ABC, SG shaft, ceramic ball bearings.

S21CL3B, .21 Sport Buggies For Truggies & buggies, a long life easy to tune and keep running engine on just about any fuel although we recommend Trinity Monster Horsepower 20% or Monster Brew 20%. Features 3 ports, ABC, SG shaft, long life steel ball bearings.

S21CL7BSTI, .21 Long Stroke Competition For 1/8th off-road buggies & trucks on shorter tracks where low end punch off the corners is essential. Use platinum 30% fuel. Features 5+2 ports, ABC SG shaft, ceramic ball bearings.

The Grand Stand is an adjustable car stand for storing or working on your R/C vehicles from 1/18th scale all the way up to the biggest monster truck. Unique design folds flat for easy storage when not in use. Composite material for light weight and super strength.

Precision machined billet aluminum rear hub carriers for the Team Losi Eight 2.0 and Team Losi Eight 2.0T. Stronger than originals 3 upper link mounting holes.

New Rock Crawler inserts made of "Genius™ Memory Foam" available in super soft and soft compounds. Genius™ Memory Foam allows the tire surface to conform to the rocks creating a bigger tire patch for more climbing traction. Less bounce and slow rebound. Fits most rock crawler tires.

Trinity has the hottest bags to carry all your R/C gear to the track. Our hauler bags come in 2 sizes. The T-8 bag is the biggest and made to hold your 1/8th scale buggies and 1/10th scale trucks with the tires removed. 1/8th truggies fit with tires removed.

There are 3 removable plastic trays and the top opens to reveal a removable tool tray, collapsible handle with wheels for easy transporting. Extra heavy construction and zipper. Outer pouches for set-up tools, I-Pods, speakers etc.

The T-10 bag is designed for 1/10th touring and 1/12th cars and has all the features of our bigger T-8 bag just in a slightly smaller size.

The TT transmitter bag is designed to complement our T-10 and T-8 bags and fits all radios currently on the market. Extra heavy construction and a built in compartment for extra battery, crystals or transponder.

Team EPIC Transmitter Bag fits older style smaller transmitters, your I-Pod, I Pod or phone charger or other gear you take to the track to keep yourself amused. Also great for slot car controllers.

TEP2000
5000mAh, 7.4 volts, 40C
With Bullet Connectors
MSRP: \$204.99

TEP2001
5000mAh, 7.4 volts, 40C
Wired With Deans Connectors
MSRP: \$204.99

TR120290
5000mAh, 40C, 3.7 Hard Case With Deans, 1 Cell
MSRP: \$39.99
1 cell Li-Po for 1/12th on-road, 1/10th oval and World GT.

TEP2006
220mAh, 6.6 volts, Li-Fe Receiver Pack With Switch
MSRP: \$34.99
Super small and light receiver battery pack.
Safe Li-Fe chemistry charges on most good chargers for Li-Po that contain a Li-Fe setting.
Correct voltage so no voltage regulator required.

TEP2500, 1 Set, 1 Male, 1 Female
TEP2501, 2 Males Only
TEP2502, 1 Pair, 2 Males, 2 Females
Low Profile Bullet Connectors
MSRP: TEP2500, \$2.99, TEP2501, \$3.25, TEP2502, \$5.99
The male connector has a notch so that the wire may be soldered on at 90 degrees to the connector itself making for a lower profile set-up.

TEP2004, 2700mAh, 7.4v, 20C Monster Li-Po Trak Pak
TRP2005, 5300mAh, 7.4v, 20C Monster Li-Po Trak Pak
MSRP: TEP2004, \$59.99, TEP2005, \$128.99
Two new Li-Po packs designed for the Traxxas truck owner with a affordable price.
Hard case with balancing plug. Thick amp carrying lead wires.

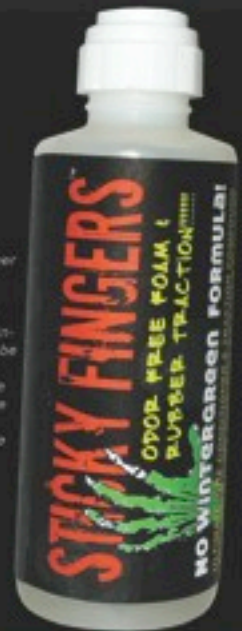

TR120291
5400mAh, 35C, 14.8 Hard Case With Deans For 1/8th
MSRP: \$250.00
1/8th off-road Li-Po battery pack. High quality
Intellect made, ROAR Legal!

TEP9002
Team Epic Sticker Sheet
MSRP: \$4.95
Full color on white vinyl.

TEP5000
Sticky Fingers Foam & Rubber
Orderless Traction
MSRP: \$11.99
New "odor free" formula for
foam and rubber tires. No wintergreen
in formula so it will be
legal for most all racing
where only an "odor free" tire
traction is allowed. If you like
Jack you will love this! 4
ounce bottle with easy to use
dauber top.
